Progress Report 2

After obtaining the petition sent by Riverkeeper and the Union of Concerned Scientists regarding the operating status of Indian Point Units 2 and 3 for the last progress report, I have since then obtained the Annual Assessment Letter for the Indian Point Nuclear Generating Unit 2 and 3 as sent by the Nuclear Regulatory Committee dated 7 months prior to the petition. I have not as of yet found any records indicating a response to the petition from the 8th of September. The Annual Assessment Letters should help our group come to a conclusion on the safety response needed concerning these two generating units by being able to debate both sides of an argument to shut them down. Along with the other information we as a group have obtained I feel we are headed down the right path and are progressing smoothly.
